Get Started With GC2 GPU Instances

Updated on Mar 9, 2025   Published on Feb 24, 2024   1 minute(s) read

Launch GC2 Instance

Here are steps to launch your first gc2 instance:

step 1: Visit https://cloud.dataoorts.com/ Register your account and verify your email.

step 2: Add sufficient credit amount to start your GC2 instance.

step 3: Select the instance type you want to spin up. The first object is the GPU model, the second object is the total GPU memory, and the third object is the total number of GPUs in the instance. For example, 'H100-80-1' means one Nvidia H100 GPU. For more specifications about GPU models, visit https://dataoorts.com/pricing/.

step 4: Select your DMI (learn more about DMI: https://dataoorts.com/dmi/) and **Launch Instance**.

step 5: To access your instance, we provide a Jupyter-based web SSH session. fyi, You can add your preferred method for accessing the instance.

Note: While the instance is launching or terminating, do not close or refresh the browser. It will take a while to process everything.
